BAUER COUPLINGS

Bauer Couplings are quick action fittings with three parts - the male ball, closure ring and female socket (with sealing ring). A single movement engages and locks the coupling, compressing the sealing ring to ensure a leakproof joint under either suction or delivery applications. The spherical construction of the ball and socket ensures the seal is equally efficient at coupling angles up to 30°degrees (less for 150mm and 200mm). Flanges, strainers etc are available to order. The BAUER treatment process infuses the steel with a special zinc alloy for corrosion resistance well beyond a normal "galvanised dip" used by copy products.
